

## ***Synth Programmer owner's manual addendum for the Pulse edition***

The addendum describes the new features introduced in OS version 1.60 supporting the „Selector“ from Virtual Music/Austria.

### ***New parameter in Preferences***

The PREFS offer a new parameters „Slc:“

It has the following options:

- OFF – select this option if your Pulse does not have a Selector built in
- Op1 – this is the right option if your Selector is running „Filter-Option 1“
- Op2 – ... according to the Selector setting „Filter-Option 2“

### ***Switching of filter modes***

Unless the PREFS parameter „Slc“ is set to „Off“ the display shows a new parameter on it's CUTOFF page: „Mode:“. It is followed by the currently set filtermode (e.g. GLB, LPF, ...). The filter mode can now be changed with encoder 4 and your Pulse should follow along right away.

### ***E-Patches***

The Programmer's internal E-Patches are saving the currently selected filter mode.
