

# STEREOPING

E-Mail [hello@stereoping.com](mailto:hello@stereoping.com)  
 Internet [www.stereoping.com](http://www.stereoping.com)

The Stereoping Synth Controller shares the same hardware for all editions. You can safely try out other editions if you own a suitable synthesizer. The on-board CPU allows about 10.000 firmware flashings until it starts to die, you can safely try out each edition multiple times.

- Print this sheet without scaling
- Use a sharp cutter or scalpel to cut out the 19 holes. Take care not to cut your fingers!
- Pin the printout on your controller using adhesive tape or a removable glue like fixogum/rubber cement
- Get the new firmware from <http://www.stereoping.com/synth-controller-downloads/?lang=en>
- Flash the suitable firmware in your controller as described in the manual: hold upper button while powering on (middle LED goes on), use a SysEx-dump tool like e.g. midiOx to send the new firmware into the midi-in-jack
